

*"We hesitate about where to go from here in space. Yet our delay in exploiting this window of opportunity could close off choices for our descendants if the no-growth paradigm - or a failure of nerve - should come to dominate the industrial nations. Because of our technologies, and the scales of our political and economic organizations, we now have the option of taking a conscious evolutionary step, expanding the presence and influence of humanity beyond the biosphere that evolved us - and possibly beyond the limits that otherwise would constrain our future."*
